

China–Shanghai Global Youth Tobacco Survey (GYTS) FACT SHEET

The China–Shanghai GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components the China could include in a comprehensive tobacco control program. The China–Shanghai GYTS was a school–based survey of students in grades middle school grades 2 and 3 and high school grade 1, conducted in 2004.

A two–stage cluster sample design was used to produce representative data for the China–Shanghai region. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 98.9%, and the overall response rate was 98.9%. A total of 1,965 students participated in the China–Shanghai GYTS.

Prevalence

- 23.4% of students had ever smoked cigarettes (Boys = 30.5%, Girls = 16.6%)
- 6.4% currently use any tobacco product (Boys = 8.0%, Girls = 4.8%)
- 2.8% currently smoke cigarettes (Boys = 4.2%, Girls = 1.4%)
- 3.9% currently use other tobacco products (Boys = 4.3%, Girls = 3.6%)
- 7.0% of never smokers are likely to initiate smoking next year
